Summary

Software Development student at NBCC with production experience as sole developer of an internal warehouse automation tool used by Rogers Communications. Experienced in C#/.NET, Java EE, SQL, and full-stack web development. Seeking a junior developer role.

Education

NBCC Saint John

September 2025 – Present

IT: Software Development – Programmer Analyst

GPA: 3.96

Relevant Coursework:

- Enterprise Java Development
- AWS Web Service Cloud Foundations
- Model View Controller Frameworks
- JavaScript Development
- Object-Oriented Programming
- Database Management and Design
- Software Engineering Principles
- Responsive Web Development

Mount Allison University

September 2019 – December 2023

Coursework toward a Bachelor of Arts

Skills

- **Languages:** C#, Java, C++, Python, JavaScript, SQL, PHP, HTML/CSS, Bash.
- **Frameworks and Tools:** .NET (WPF, WinForms, WinUI), Java EE, Node.js, React Native, Bootstrap, Tomcat.
- **Databases:** SQL Server, MySQL, Oracle, MongoDB, Firebase.
- **Cloud and DevOps:** Azure, AWS, Git/GitHub, Netlify, Linux.
- **Practices:** Agile/SDLC, OOP, REST APIs, automated testing, Jira.

Experience

General Worker

March 2024 – September 2025

Arrow Workforce – (Contractor for Rogers)

Saint John, NB

- Sole developer of Autobox 4, an internal warehouse automation tool used for inventory tracking, daily processing, and data analysis.
- Wrote **user manuals** and **system diagrams**, and iterated on the design from stakeholder feedback.
- Replaced manual barcode scanning with an automated process backed by a local and cloud database, improving workflow efficiency for the entire team.

Projects

Autobox 4 (C#/WPF/Firebase): Desktop application that automates warehouse data entry and syncs transactions between a local database and Firebase. Integrates with existing warehouse systems and replaced manual barcode scanning. In production use at Rogers Communications.

[\(View Code\)](#)

JSON Parser (C++): Built a custom JSON parser in C++ supporting objects, arrays, strings, and numbers, with error handling and white-space/keyword recognition. Applied manual memory management and recursive-descent design.

[\(View Code\)](#)

Coders Crypt (C#/WinForms): Developed a turn-based strategy game applying OOP principles (polymorphism, interfaces, method overloading), with unit tests and structured exception handling.

[\(View Code\)](#)

Leadership

NBCC Class Representative

2025 – Present

- Led study groups to support classmates.
- Attended meetings with student council and academic chairs.

Canadian Federation of Chess Tournament Organizer

2023 – Present

- Organized and acted as arbiter for the Mount Allison Open Chess Championship 2023, hosting 35 players.
- Coordinated with the Chess Federation of Canada on rules and sanctioning
